Professional Summary

Full-Stack Developer specializing in scalable SaaS products, AI-powered web applications, and real-time systems on the MERN/Next.js stack. Skilled in cloud deployment (Vercel, Render, AWS, MongoDB Atlas), microservices-style multi-tenant architecture, REST APIs, and CI/CD pipelines. Built and shipped 2 production-grade platforms integrating Google Gemini, OpenAI, and Mistral AI. Collaborated effectively in cross-functional hackathon teams to deliver award-winning products under tight deadlines.

Technical Skills

Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend	React.js, Next.js, Vite, Redux Toolkit, Tailwind CSS, Framer Motion, Gsap
Backend	Node.js, Express.js, REST APIs, Socket.IO, JWT Authentication, OAuth2, Middleware, Microservices Architecture
Database	MongoDB, MongoDB Atlas, Mongoose, TTL/Compound Indexes
AI / APIs	Google Gemini 2.5, OpenAI API, Mistral AI, Prompt Engineering, WebRTC, Structured JSON Output
Cloud & DevOps	AWS, Vercel, Render, Docker, CI/CD Pipelines (GitHub Actions), Git, Postman

Projects / Experience

TalentIQ — AI-Powered Talent Intelligence Platform

Live | GitHub

Next.js 14, TypeScript, React 18, MongoDB, Google Gemini 2.5, WebRTC, Socket.IO, AWS, Tailwind CSS

- Architected a multi-tenant SaaS ATS with 17 Mongoose schemas and dual JWT authentication (access + refresh tokens), achieving full company-scoped data isolation across all API routes.
- Automated AI resume scoring by integrating Google Gemini 2.5 with structured JSON schema output, scoring 100% of candidates 0–100 across 4 dimensions with zero parsing failures.
- Designed a serverless WebRTC video interview system with a TTL-indexed MongoDB signal store, removing the need for a persistent WebSocket server while supporting full peer-to-peer video.
- Optimized a drag-and-drop Kanban pipeline with virtualized rendering, enabling smooth management of 500+ candidates with zero DOM performance degradation.
- Built a cross-job AI matching engine that surfaces candidates with $\geq 75\%$ skill overlap, reducing manual sourcing effort via a cached weekly analytics summary.
- Streamlined background email delivery using a job queue architecture, improving deliverability while preventing rate-limit failures on 100% of outbound notifications.

SupportBotAI — AI-Powered B2B Customer Support Platform

Live | GitHub

React 19, Node.js, Express 5, MongoDB, MistralAI, Socket.IO, Web Push API — **Won Creative Excellence, Sheryians Cohort Hackathon**

- Engineered an AI chat engine with MistralAI using custom prompt engineering and confidence-tagging, automating AI-to-human escalation without a separate classifier model.
- Implemented a real-time multi-party messaging system (Socket.IO, 7-room topology) synchronizing 3 client interfaces simultaneously with zero message-sync delay.
- Designed a workload-aware ticket routing engine using atomic database operations, eliminating race conditions across concurrent agent assignments.
- Delivered a Web Push notification system (VAPID/PWA) supporting 9 notification types with quiet-hours and rate-limiting controls, ensuring 100% delivery even when the browser is closed.
- Automated AI knowledge-base population with a Puppeteer-based crawler achieving 85% duplicate-content reduction across up to 8 crawled pages.
- Deployed an embeddable chat widget via a single `<script>` tag, enabling cross-origin integration on any third-party website in under 5 minutes of setup.

Education

Dr. Babasaheb Ambedkar Marathwada University	Maharashtra, India
Bachelor of Science (B.Sc)	July 2025 – June 2028 (Expected)

Certifications

- Diploma in Web Development — STP Computer Education, Grade A (July 2024 – July 2025)
- Full-Stack Web Development Certification — Sheryians Coding School
- Hackathon Achievement — Winner, Creative Excellence Award, Sheryians Coding School
